LaTeX
What did I learn?

Shane Pereira

April 5, 2017

What Editor to use?

First of all I learned that TexShop is a very easy-to-use editor for MacOS.

The basics

I learned the basics of LaTeX. Things like: - Starting your document - Headers - Sections - Pagenumbering - Table of Contents

References

I learned how to use BibTex to automatically show the reference.
This way I cited my sources from in my article, I now know how to
simple cite from google scholar.

Images

I now know how to use images in my LATEXdocuments I used the pdfpages package, which allows you to easily type "includegraphics" following by the size and file path/filename
